
T-FACE

A TECHNOLOGY PLATFORM
ASSOCIATED WITH A
HYPER-COSMETIC SYSTEM

DEDICATED TO
ALL FACIAL TREATMENTS

T-FACE

PROFESSIONAL CHECK-UP
AND NINE TECHNOLOGIES

ENTIRELY DESIGNED AND MANUFACTURED
IN ITALY

T-FACE

SYSTEM CHECK-UP

Thanks to the adoption of a new computer intelligence system, the professional can constantly monitor the progress of treated customers and missed sessions, so they can stay up to date.

CAMERA

Thanks to the attached ultra-high-definition, zoom and autofocus camera, it is possible to professionally analyse the skin texture and with the ultraviolet lights present study the skin surface in every detail. Each useful image can be saved so that it can then be compared with the next one after the treatments.

Based on the result of the check-up, the system supports the beautician in developing highly customised pathways to achieve beauty and skin health.

INTEGRATED SOFTWARE

The simplification of the software ensures greater security of treatment. Once the customer form is filled out, the beautician will have a myriad of treatments to choose from, combining the technologies within the workstation to be able to solve any imperfection the customer may have.

BLEMISHES THAT CAN BE TREATED

- Wrinkles
- Loss of elasticity and definition of contours
- Non-surgical mini facelift
- Dark spots
- Skin dryness
- Acne and oily skin
- Blotchy skin
- Sun damage
- Superficial and deep skin cleaning
- Scarring
- Eye bags
- Non-surgical blepharoplasty
- Skin regeneration
- Muscle massage
- Muscle tone recovery
- Lip volume and colour
- Double chin treatment

AND NOT JUST FACE

- Special stretch marks treatment
- Vulvar rejuvenation
- To combat thinning and loss of hair volume

CLEANING FUNCTIONS

SUPERFICIAL.
MEDIUM
DEPTH

HYDROJET

cleanses the face in depth and stimulates cell regeneration

VACUUM ABRASER

performs deep peels to treat scars and stretch marks, improving their appearance from the very first session

ULTRASOUND

treats skin hyperkeratosis and dry skin

T-FACE

TREATMENT FUNCTIONS

MESOSPHERES

offers an anti-ageing, rejuvenating, smoothing and toning effect

ION FLOW

reduces the colour of dark spots, stimulates the production of collagen, hyaluronic acid, elastin and other proteins that keep the skin toned, smooth and young-looking

INTIMATE ION FLOW

restores tone and elasticity to female intimate areas

ROLLER MICRO-NEEDLING

delivers cosmetics to the skin and simultaneously stimulates tissue regeneration

MICRO-NEEDLING WITH PLATE

treats deep wrinkles and stretch marks

PHOTOBIO STIMULATION DOME

different wavelengths act on wrinkles, enlarged pores, scars, acne marks and other skin imperfections. Thanks to the lights, this technology offers customised solutions for every skin type

T-FACE

HYDROJET

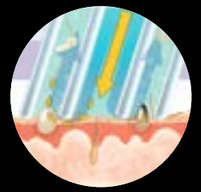
TECHNOLOGY

- Aquapeeling

FEATURES AND BENEFITS

- To cleanse the face in depth while stimulating cell regeneration with a jet of water and suction, water that can be enriched with hyaluronic, mandelic or salicylic acid automatically drawn from the machine's reservoirs.

- WATER PEELING WITH SEQUENTIAL ACIDS



- DEEP HYDRATION WITH HYALURONIC ACID

- TISSUE RESTRUCTURING AND OXYGENATION

VACUUM
ABRASER

TECHNOLOGY

- Dermopeeling

FEATURES AND BENEFITS

- Thanks to its surface with diamond powder, it allows very deep peelings that are indispensable for treating scars or stretch marks, thinning them already from the first session.
- This special treatment takes care of the skin, smoothing it and gently removing the most superficial layer, skin resurfacing. This makes it possible to remove many small or large skin imperfections, achieve smooth, even and firm skin, and stimulate the production of collagen and elastin.

ULTRASOUND

TECHNOLOGY

- Ultrasonic peeling
- Sonophoresis

FEATURES AND BENEFITS

For treating all skin hyperkeratoses and dry skin.
The ultrasound emitted by the steel bar has a dual function:

- By applying the edge of the bar to the skin, it produces an ultrasonic peeling that removes all impurities and desquamating corneous cells.
- Instead, the flat side of the bar (as in the picture) activates SONOPHORESIS, i.e. the ultrasound promotes the penetration of cosmetic actives.

MESOSPHERES

TECHNOLOGY

Compressive micro-vibration

FEATURES AND BENEFITS

- Double movement, each sphere rotates on itself and each row of spheres around the axis of the handpiece. This generates a vibrational massage with adjustable speed from 1 to 300 rpm and depending on the set speed you can obtain a superficial or deep massage, treat under-chin fat, have a draining effect, reshape the tissue and epidermis texture with evident results in restructuring the dermis in just a few sessions (anti-ageing effect, evident rejuvenation, relaxation and toning).

IONIC FLUX PLANCK

TECHNOLOGY

Ionic flux

FEATURES AND BENEFITS

- It instantly generates a huge energy rush that induces tissue elasticity and filling of non-compact facial areas. On dark spots it reduces colour.
- Also called 'fibroblast therapy' because of its effect on fibroblasts, the cells in the dermis that produce collagen, hyaluronic acid, elastin and other proteins that keep the skin toned, smooth and youthful.
- Also suitable for treating NON-SURGICAL BLEPHAROPLASTY AND MINI-LIFTING, SPOTS AND STRETCH MARKS.

T-FACE

IONIC FLUX PLANCK

INTIMA

TECHNOLOGY

- Ionic flux

FEATURES AND BENEFITS

- To restore tone and elasticity to the female intimate areas in combination with the specific product INFUSION INTIMA.

T-FACE

MICRO-NEEDLING
ROLLERS

TECHNOLOGY

- Bipolar radio-frequency.
(Transdermal Vehiculation)

FEATURES AND BENEFITS

- By rotating it over the areas of the face, the small needles deliver the cosmetics applied to the skin and at the same time stimulate tissue regeneration, a regeneration that is intensified if the fractional radio frequency function is also activated: each needle becomes a radio frequency emitter.

MICRO-NEEDLING
PLATE

TECHNOLOGY

- Bipolar radio-frequency.
(Transdermal Vehiculation)

FEATURES AND BENEFITS

- It has the same functions as the one with the rollers but is specifically for treating deep wrinkles. Also suitable for treating stretch marks.

T-FACE

DOME
PHOTOBIOSTIMULATION

TECHNOLOGY

- Photostimulating lighting

FEATURES AND BENEFITS

- The more than 350 LEDs on the inner surface can be selected in 7 different colours and therefore with 7 different wavelengths, each with its own different effectiveness on the skin: for example, red stimulating, yellow anti-wrinkle, green anti-blush, blue anti-acne, so they act on different skin treatment fronts: wrinkles, enlarged pores, scars, acne marks and imperfections of all kinds. Thanks to the lights, each designed to respond to a specific problem.

T-FACE

HYPERCOSMETICS INFUSION

The technology is accompanied by 11 ampoules with a very high concentration of active ingredients suitable for the various imperfections to be applied to the affected areas to be treated and a protective cream against all sources of environmental pollution (blue light, dust, fumes, earth heating, IR, UV A) The same ampoules and cream are also available in a home version.

INFUSION 1
ANTI-AGEING

INFUSION 2
ANTI-REDDENING

INFUSION 3
ANTI-SPOTS

INFUSION 4
DARK CIRCLES AND BAGS

INFUSION 5
ANTI-COUPEROSE

INFUSION 6
FIRMING

INFUSION 7
LIP CONTOUR FIRMNESS

INFUSION 8
STRETCH MARKS

INFUSION 9
HAIR LOSS STRENGTHENING

INFUSION 10
IMPURE SKIN

INFUSION 11
INTIMA ANTI-AGEING

HYPERCOSMETICS ABSOLUTE GREEN

DEFENCE AND REGENERATION:

Absolute Green Cream is an essential component, along with the ampoules, and is available in a 250 ml format for use in the cabin and in a handy 50 ml jar for use at home.

Counteracts skin ageing by providing an effective defence against harmful agents that damage the skin every day. It reduces the visible signs of ageing and slows down the formation of new wrinkles.

BENEFITS:

1. Complete protection: creates an effective protective shield over the skin, defending it from external agents that can accelerate skin ageing.
2. Youthfulness: thanks to its advanced formulation, it helps the skin maintain its normal physiology typical of youth, improving the appearance and vitality of the skin over time.
3. Hydration and nourishment: provides deep hydration and essential nourishment for the skin, helping to keep it soft, supple and radiant.
4. Reduction of the signs of ageing: used regularly, it reduces the appearance of wrinkles, spots and other visible signs of skin ageing, resulting in younger-looking, brighter skin.
